Round 3B **Cited briefing**

PLUGINS-KIT:TASK-KIT-EXTRACTION

Task kit extraction P1 active

A readable handoff assembled from independently refreshed answers.

Answering service On - Spend usage Off

Dashboard settings / Answers

Concept: The briefing leads, but answer boundaries and answerers remain visible. Exact script facts interrupt the prose as compact evidence blocks.

ORIENTATION BRIEF

You are choosing the task-detail shape before the next dashboard release.

The brief is a view over answers, not a second generated summary.

Q1 PURPOSE

The task system is already independent. The current goal is a dashboard that makes active work easy to understand and resume.

local qwen as of task record 10:42 current

Q2 EXACT CHECKPOINT

18m since last activity; **3** open items; **2** waiting on you; stale/abandoned signal: **no**.

script - exact task record + sessions, read 10:47

Q3 STANDING

Session tracking is ready to release. The detail view has reached round 3, with no implementation started and no engineering blocker.

local qwen as of task record 10:42 current

Q4 CHANGE SINCE LAST SESSION

Session tracking landed and detail-view design advanced to round 2. This answer predates the latest task-record edit.

local qwen answer as of 09:55 inputs now 10:42 stale

Q5 CROSS-STREAM NEXT ACTION

Waiting: spend usage is off. Local Qwen declined the release-and-design planning question. Luna is next in the answerer order.

luna - paid not run

EXACT CODE FACTS

`8ab21c4` prepare durable session records
latest task commit, 09:58

`f3027ae` separate local and remote sessions
task history match, 09:31

script - exact task commit refs + git, read 10:47

ANSWER LEDGER

Q1	Purpose local qwen - task record 10:42	CURRENT
Q2	Checkpoint script - task record + sessions 10:47	EXACT
Q3	Standing local qwen - task record 10:42	CURRENT
Q4	Since last session local qwen - answer 09:55, inputs 10:42	STALE
Q5	Next across streams luna - paid; spend usage off	WAITING

Cheapest capable answerer

Script facts are placed directly into the brief; local Qwen supplies interpretation; paid answers appear only with spend usage. The ledger preserves the as-of and input time for each answer.
